

TERMINAL AND SERVER TO SYNCHRONIZE CONTACT DATA, IN  
PARTICULAR TELEPHONE NUMBERS, BETWEEN TERMINALS OF  
VARIOUS TYPES

Abstract

The invention relates to a fixed-telephony terminal (16) comprising a telephone directory and means for transmitting and receiving SMS messages.

The terminal comprises:

means for converting telephone directory data into SMS messages in order to transmit them to a server (10), and/or

means for receiving SMS messages from the server, representing directory data, and means for converting these received SMS messages into directory entries.

In one embodiment, the terminal comprises means for requesting automatic synchronization or manually-controlled synchronization of the directory.
